

PROFILE

Full-Stack Developer and Founding Engineer at SpeedoExpress, where I architected the live driver GPS tracking system (Redis TTLs, WebSockets/SSE, Leaflet + OSM, PostGIS) for a B2B last-mile logistics platform and shipped its driver app to production. Founder of Anvaya Labs, a Udyam-registered software agency, and lead developer of BiteSite (bitesite.in). Experienced in real-time systems, payment integrations, multi-tenant architecture, blockchain smart contracts, AI integration, and production security.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Java 21, Python, Solidity, C++, SQL	Frontend:	React, Next.js, React Native, Tailwind, Leaflet + OpenStreetMap, Three.js, Framer Motion
Backend:	Node.js, Express, Spring Boot 3.5, FastAPI, Cloudflare Workers, WebSockets/SSE, Socket.io	Databases:	PostgreSQL + PostGIS, MySQL 8, Redis, Supabase, Cloudflare D1, MongoDB, SQLite, Firestore
Web3 & AI:	Solidity, Hardhat, Ethers.js, Gemini AI, Groq/Llama, AI SDK	Tools:	Docker, Git, Linux, GitHub Actions, Flyway, Razorpay, WhatsApp Business API, Bubblewrap, Playwright

EXPERIENCE

SpeedoExpress2026 – Present

- Founding Engineer
- Architected and built live driver GPS tracking for a B2B last-mile logistics platform: Leaflet + OpenStreetMap rendering, Redis with TTL-based coordinate expiry so stale positions self-evict, WebSocket/SSE push to watching clients, and PostGIS spatial queries for dispatch and proximity
 - Built the driver app, now live in production at driver.speedoexpress.org
 - Shipped a full platform redesign touching 182 files
 - Built a WhatsApp-based B2B ordering flow on the WhatsApp Business API (AiSensy), and shipped the platform as an installable PWA to the Play Store via Bubblewrap
 - Diagnosed and resolved a production Node.js heap-exhaustion crash, tracing it from the crash signature back to the allocation responsible
 - 5 applications, 104 API endpoints, 65 screens, 345 automated tests and 4 production environments from one codebase; row-level security default-deny, webhook-verified Razorpay payments, money stored as integer paise

BiteSite2026

- Lead Developer
- Built a multi-tenant SaaS for college canteen pre-ordering on Java 21, Spring Boot 3.5, MySQL 8 and Flyway; live at bitesite.in with two Android apps
 - Enforced tenant isolation from the authenticated principal rather than the URL, proven by an isolation test suite running against real MySQL in GitHub Actions CI
 - Made payment mandatory before order fulfilment, with client-callback and webhook paths converging on one idempotent, signature-verified confirmation

Anvaya Labs2026 – Present

- Founder
- Founded and registered a software agency (Udyam registered); ran client engagements end to end including scoping, DUNS/D&B verification for two registered entities, delivery and handover
 - Delivered World Express Courier (worldexpress.in): live courier and cargo platform on Astro 7 + Cloudflare Workers + D1, with consignment booking, Excel bulk import, staff admin and tracking across 9 partner couriers
 - Built Anvaya Coding Lab: self-hosted assessment platform grading Java against hidden tests inside network-isolated, read-only Docker containers

Conventus — NIET MUN & Debate Society2025 – 2026

- Vice President
- Organised VARTALAB, a 6-day communication workshop for ~125 participants, delivered on a zero budget
 - Ran CMUN, an online Model UN conference across 5 committees (DISEC, UNHRC, UNCSW, AIPPM, IP)
 - Negotiated a tiered-commission referral MOU between Conventus and The Education Tree

Impact Career Solution2024

- Co-Founder
- Top 43 Finalist out of 500+ entries at MIT Pune Startup Event. AI-powered career guidance platform

Freelance Game Developer2025

- Roblox Platform
- Built game mechanics and scripted gameplay systems in Lua for client commissions on Roblox

PROJECTS

- Attestr** — Decentralized Media Authenticator
React, Solidity, Hardhat, Ethers.js, Firebase, Three.js, Chrome Extension
- Blockchain-powered media verification with smart contracts, AI deepfake detection, ELA forensics, and perceptual hashing. Innovate Bharat Hackathon 2026

- CodePilot** — AI Coding Agent CLI
TypeScript, Node.js, AI SDK, Ink, Zod — Published on NPM
- Multi-provider AI coding assistant (Anthropic, OpenAI, Google, Ollama) with parallel sub-agents, plan mode, file tracking

- CrackNIET** — AI Exam Assistant Extension
Chrome Extension, Manifest V3, OpenRouter AI, Content Scripts
- Chrome extension with AI exam assistance for lamneo, HackerRank, NPTEL. Multi-layer architecture with stealth injection and BYOK model

- FitTrack** — AI Nutrition Assistant
React Native, Expo, Gemini AI, SQLite, Zustand
- Cross-platform mobile app with AI food recognition, barcode scanning, offline-first architecture

- Amazon Scraper** — Product Data Scraper
Node.js, Puppeteer, Express, Stealth Plugin
- Web scraper with anti-detection stealth plugins, resilient selector fallbacks, real-time progress UI, and CSV export

- AttendEase** — Enterprise Attendance System
React, PostgreSQL (Neon), JWT, Vercel Serverless
- Full-stack attendance platform with JWT auth, normalized schema, analytics dashboard. Deployed on Vercel

- OmniAI** — AI Content Generator SaaS
